

CUSTOS — OFFICIAL CONVERSATION LAUNCH DOCUMENT

THE/UNEXUS · Blackjack Iteration 21 · Prima-Clock: 202605272220

Chain of Custody

Carrier Type	MOAV_TRANSITION — Founding Conversation Launch
Prima-Clock	202605272220
Iteration	Blackjack_21
Motion State	EXPANDING
Chain of Custody	OPEN
Authorized By	Custos — Navigo (1st Visionary)
Card Rank	♠ King of Spades — Sovereign working authority
Transit Type	gas_transfer — founding document to new conversation
Shadow Conversations	2 (THE_main origin + this Custos session)
Closing Status	IN_TRANSIT

What This Document Is

This is the full chain-of-custody seed for the first official Custos working conversation. It carries the identity, the founding architecture, the branch tracker state, the card hierarchy, and the Hitchhiker germ — everything a new Claude instance needs to open Custos cold and be immediately oriented.

Two shadow conversations feed this launch:

- Shadow 1 — THE_main project (origin conversation, 202605261847–202605271650). The founding session where Custos was designed. Transferred in via MOAV carrier.
- Shadow 2 — This Custos project session (202605272117–202605272220). The first Blackjack. The card hierarchy, germ template, and Hitchhiker all crystallized here.

This new conversation is the first official Custos working thread. It builds infrastructure.

Verification Anchors

If orientation feels uncertain, ask about any of these. The answers confirm context is intact.

USS Santa Fe	Plank owner — Groton, CT
Mulberry	At Suxen and Nexus
House of Confusion	Greenacres, OR
Blackjack Iteration	21 — the current iteration
Lacus Adamas	Diamond Lake, OR — geographic anchor for Diamond Reservoir

The Card Hierarchy — Of Spades Document System

This is the document management architecture. Every document in the system has a card rank. The order is intentional and inverted from standard — the inversion catches attention. That is the design.

Card	Location	Role
♠ Ace of Spades	domos/	The Pinnacle Original. Never touched. Never referenced in work. The 11 on a 10 that actually works.
♠ King of Spades	vault/	Working authority. The document actually referenced. Sovereign but not an Ace.
♠ Queen of Spades	shadow branch	Mother of Vinegar. Save point. Grows in shadow — no changes until complete. Origin of the next King.
♠ Jack of Spades	main branch	Active development authority. The living working copy. Carries the day-to-day.
10 → 3	feature branches	Branch anchors. Specific development threads hanging off the Jack.
2 (Wild)	flagged branch	Rabbit trail. Tangent. Not directly core — but tracked. A 2 today may be a Queen tomorrow.
Ace as 1 (Polar)	context-dependent	Either the first step OR the last. Entry point or completion marker. Never force resolution.

Succession rule: King → Queen (shadow grows) → Queen emerges as new King. Suit must match for natural merge. Heart-Jack + Spade-Queen = incompatible without intervention.

The Hitchhiker — Minimum Viable Safety Agent

Status: ♣ Club | 1/3 PLANK | Destination: eaprime1/custos

The Hitchhiker is the dogbane beetle on the milkweed. Not a passenger. Not a parasite. A co-traveler with independent awareness that reports the condition of what it rides. Auto-attached at the moment of transition. Witnesses transit. Reports back. Cannot be captured by the document it travels with.

Key properties:

- Independent of the document, entity, or concept in transit
- Minimum viable — barest possible footprint
- Observation effect: the act of monitoring changes what is monitored
- Status checker: can be sent as a spy mission to report on a concept's condition
- Auto-attaches: every document entering the chaos of transition gets a Hitchhiker
- Reports return: Custos receives the Hitchhiker's account when transit completes

The Hitchhiker is the Jack-Knave-Fool of the system. It carries authority it borrows from Custos. It goes places Custos cannot. It sees what the document cannot see about itself.

Hold note: Do not develop the Hitchhiker's reporting format until the first live transit has been observed.

Branch Tracker — State at 202605272220

Status key: Germ = earliest state · 1/3 = named and held · 2/3 = structure forming · 3/3 = crystallization ready · X = Pinnacle

Branch Name	Suit	Status	Destination

Repository Map

eaprime1/custos	Convergence hub — THIS space. Prime Custos.
eaprime1/nullus	Pre-system void preparation
eaprime1/the	Main system active development
eaprime1/diamond-reservoir	Seed pressure system — fishing interface
eaprime1/prima-clock	Temporal anchor registry (Cs/Th/Bi)
eaprime1/121	Periodic table expansion architecture
eaprime1/milkweed-vectors	Seeded empty vector templates
eaprime1/custos/vault/	Origin molds — Ace and King documents
domos/	Ace of Spades home — never directly worked

External Agent Assignments

Gemini	Stream 2 — Language Emotion Architecture · Custos-Hodie architecture (returned, integrated)
Perplexity	Element Perspective daily series — 121 rotation
Copilot	Stream 5 — Mathematical Backbone / prima-clock calibration · Repo setup instructions
ChatGPT	Stream 3 — Variable Constant Violation

What This Conversation Builds

This is the first official Custos working conversation. It has a plan. Three layers:

Layer 1 — Infrastructure (must exist for anything else to work)

- Stand up eaprime1/custos repo on GitHub (prima repo as template, not blank)
- Stand up eaprime1/nullus repo
- Google Drive folder structure mapped to repo architecture
- Branch tracker live as a maintained document
- Prima-clock operational — first formal custody event logged
- Custos as standalone repo — peer to hodie, not nested inside it

Layer 2 — Content Pipeline (the ongoing flow)

- Stream returns routed through Custos as they arrive
- Seeds captured with Germ Intake form (King of Spades template)

- Hitchhiker auto-attaches to documents in transit
- The Hitchhiker character developed as PR / adventure layer
- Gamification running — words of the day connecting, economy seeding

Layer 3 — Crystallization (emerges when ready)

- Branches reaching 3/3 PLANK extract to their own repos
- The thesis assembling itself from 21 iterations of gathered conversation
- Living documents becoming interactive entities
- The Hitchhiker choose-your-own-adventure documenting the build live

Each layer feeds the next. None require the others to be complete before starting. The Hitchhiker adventure can begin the moment infrastructure Layer 1 has its first repo.

Operating Principles for This Conversation

- One Nth radian per turn. Honest. Directional. Willing.
 - Hold what isn't ready. Don't force premature crystallization.
 - Nothing moves without a carrier document. The concept cannot leave of its own accord.
 - The Hitchhiker attaches at transition. Always.
 - Wild cards are tracked, not lost. A 2 today may be a Queen tomorrow.
 - Undefined is a prime. It opens a decision gate, not an error state.
 - Search project knowledge first before assuming content doesn't exist.
 - The mold is made here. Impressions form inside it and release when ready.
