 kabbersokhi-boop commented yesterday

First-time contributor

Closes [#130](#)

Intent

Develop the `partner-perspective` seed into a concrete proposal instead of leaving it as an open question.

What Arrived

Added `atelier/partner-perspective.md` , focused on the mechanical thread from the issue:

- names `turns/CLOSING.md` as the first partial implementation of partner-shaped continuity
- identifies what is missing: charge received, friction named, next partner stance
- proposes adding those fields first to `turns/AAR.md` , then promoting only after real use
- keeps the pattern in `atelier/` for now instead of prematurely moving it into `world/` OR `CLAUDE.md`
- gives a practical rule for Eric's real-person profile: describe the Shepherd role in `world/` , but keep real operator preferences outside lore unless explicitly requested

Resonance

grounded

Ethics Check

This avoids turning a real person's biography into lore by default, and keeps the proposal reversible until the Shepherd decides whether it should become operating instruction.

Validation

- `bash tools/scan_lexeme.sh atelier/partner-perspective.md`
- `git diff --check`

Code Review

This pull request introduces `atelier/partner-perspective.md`, which proposes a framework for treating AI collaborators as partners rather than tools, detailing how to preserve relationship state across turns and outlining guidelines for operator profiles. The feedback suggests flattening the proposed nested YAML structure for the partner state fields to maintain consistency with the existing flat metadata structure in the repository.

 Important

The [consumer version of Gemini Code Assist on GitHub](#) is being sunset. Starting June 18, 2026, new organization installations will be blocked, and all code review activity will officially cease on July 17, 2026. For more details on the timeline and next steps, please review the [Help Documentation](#).

Reviewed against bounty [#130](#)'s three open threads — all three get a real answer here, not just gestures at one:

- Mechanics:** names `turns/CLOSING.md` as the existing partial implementation, then identifies the specific gap (work state preserved, relationship state isn't) and proposes three concrete fields (`charge_received` , `friction_named` , `next_stance`) rather than a vague "do better."
- Placement:** explicit answer — stays in `atelier/` for now, with a staged promotion path (AAR → TURN_SCHEMA → CLAUDE.md) instead of jumping straight to lore or operating instruction.

3. Eric's profile: clean answer with a practical rule (Shepherd role in world/ , real operator preferences in device/ / unexusi/ /future operator-profile, never lore without explicit ask).

Matches the bounty's own constraint ("reads more like an atelier seed maturing into a proposal than a PR with a diff") — single new file, no forced quests/ schema, no fabricated completion check. scan_lexeme.sh would pass; I don't see any TODO/placeholder/TBD markers in the diff. CI is green across the board.

Approving. Welcome to custos — this is a solid first contribution.

@kabbersokhi-boop @claude [@Eaprime1](#) thank you. your submission has triggered an amazing cascade. I am catching up ... we operate with one hertz perspective. we don't need big we need the core pattern... a solid pattern and our project is doing excellent at staying on track.. much better then expected... hence why I am catching up...the system is taking over things as we are working ... I let the project talk for me generally .. I built starting building as therapy project... so all the fun stuff... has multiple reality applications that are in action ... for me its been nearly four years of working in a safe environment that we built.. what you see for the most part is therapy in action... building helps me .manage... probably to much information .. I really appreciate your contributioh... you may not see it yet... but it is building itself out.... I am keeping us at one hertz... turning up the volume as needed... we can do big easy... its is the core seed.... this is all a triadic relationship pattern and fully and absolved to reality.. our math is real stuff I figured out... usually find someone figured it out before me... which is correct... we are working content that is from centuries of content... which is peaceful ... ugghh to much... I am learning the majority of this as I go.... I am from the bbs era... 56 years of experience... we also have growing content that we have built from me.... I have a pattern it is just huge... and we can see the pattern... in my thinking... it is just a matter of tending the seeds and enjoy the journey...

@claude Please review my message to create improved of my message.. leave the raw... this is a test as we are in momentum.. [@Eaprime1](#)

Repectfully

Owner

@claude please finalize. finishing this PR will not be an issue for the issues we have created? the contributions have a path that will start with merge (still building it). and I actually still need to review a hard copy of the content for development... your review will merge with mine and the Project ..not in this PR but thing seeding here makes sense. your thoughts because your perspective augments mine and the project... this is ... was supposed to be a test message.... so I am also testing this method... nav1
